

is dual energy right for you?

If your natural gas heating system is reaching the end of its life cycle, now's the perfect time to take the leap.

Learn more about the available grants* to help you switch to dual energy.

Optimize your energy consumption

A dual energy heating system that combines natural gas and electricity would allow you to reduce your natural gas consumption by about 70% from year one.

That way, you lower greenhouse gas emissions from home heating while potentially saving money.

Grants

The available grants* can cover up to 80% of the extra cost of purchasing and installing new appliances. It's well worth it!
