differently

Two energies are better than one

By heating with electricity most of the time and with natural gas during periods of extreme cold (-12°C and below*), a dual energy heating system could help you **reduce your natural gas consumption by about 70%** as of the very first year.

Dual energy, a solution with multiple benefits

Generous grants

Thanks to the government of Québec's "Chauffez vert" program, you could **reduce by as much as 80%**** the purchase and installation costs for new electrical equipment, such as a heat pump.

Savings year after year

Use the right energy at the right time and reap recurring savings with Hydro-Québec's Rate DT. Plus, enjoy summer savings on air conditioning and your electrical devices, such as a pool heater or an EV charging station.

A win for the environment

By opting for dual energy, you not only play your part in the fight against climate change, you also make more efficient energy use during periods of extreme cold.

Have you done the math yet?

To discover the grants available and the savings you could achieve, call us at **1-833-361-1313** or **scan the QR code**.

* or -15°C, depending on the region. **Certain conditions apply. Grants may vary according to the equipment installed and the building's characteristics. Additional costs may apply with respect to the electrical work required. To benefit from the offer, you must sign a contract with your commercial representative or your Énergir Partner prior to installation. Details and conditions for eligibility are available at energir.com/en/residential/dual-energy. Certain conditions apply, among them that the offer applies to homes that use natural gas to heat their space. The conditions of the offer and the amounts of the grants available are subject to change without prior notice.
